CAREER OBJECTIVE

I am a second-year Information Systems student at UIT with hands-on experience building backend systems and data pipelines using Node.js, Python, and SQL/NoSQL databases. I am passionate about backend engineering and data infrastructure, and I am eager to deepen my expertise in data pipeline development, distributed systems, and real-time data processing. I am seeking an internship where I can contribute to real-world backend and data engineering projects while learning from an experienced team.

SKILLS

Node.js / JavaScript	REST API development, scripting, automation, and data ingestion pipelines
Databases	MongoDB (NoSQL), PostgreSQL (SQL) – schema design, querying, and data management
Python	Data collection, processing, and ETL scripting using Pandas, NumPy, Selenium, NLTK
Data Processing	Web scraping, text preprocessing, data cleaning, pipeline automation
Cloud Storage	Cloudinary – automated media ingestion, metadata management via API
Tools	Git, SQL, Spreadsheets – version control, querying, and reporting

PROJECTS

University Exam Question Bank

2/2026 – 4/2026

Teaching Assistant Project – UIT

- Built a REST API backend using Node.js and MongoDB for a searchable university exam question bank.
- Developed an automated ingestion script to categorize and upload hundreds of exam images to Cloudinary, storing generated URLs and metadata into MongoDB.
- Implemented a synchronized deletion feature to maintain data integrity and keep the database current.

Hotel Reviews Data Pipeline

6/2025 – 11/2025

- Designed and built an automated data collection pipeline using Python and Selenium to scrape unstructured social media comments at scale.
- Implemented a data processing and labeling stage using NLTK to clean, filter, and structure raw text for downstream ML use.

- Stored the processed dataset in PostgreSQL, making it queryable for analysis and model training.

WORK EXPERIENCE

University of Information Technology (UIT)11/2025 – Present

Research Assistant

- Built and maintained a web scraping pipeline using Python and Selenium to collect large-scale social media datasets.
- Processed and structured collected data using NLTK and stored results in PostgreSQL.
- Worked closely with research team to iterate on data collection requirements and pipeline output format.

EDUCATION

VNUHCM – University of Information Technology (UIT)2024 – Present

Bachelor of Information Systems

CERTIFICATES

Google Data Analytics Professional Certificate5/2026

Google / Coursera

ACTIVITIES

RMIT Neo Culture Technology Club4/2026 – 5/2026

Competitor – NEON LEAGUE

- Advanced to Top 20 finalists out of 100+ competing teams.
- Conceptualized an IoT device for real-time environmental data collection and analysis.
